

Telemedicine

Say Hello to the Modern Day
House Call

What is Telemedicine?

If you have a minor illness or concern, you can be in touch with a physician within minutes from the comfort of your own home.

Telemedicine services use Skype/FaceTime technologies to connect patients with providers who can diagnose and treat minor medical concerns.

Why Use Telemedicine?

- Convenient access from home, office or even when you are traveling
- In most cases telemedicine is less expensive than urgent care or ER visits
- 24 hour/365 day access to care
- 10 minute average appointment time
- Avoid other sick patients
- It's secure and confidential

When to use Telemedicine

- Sinus infection
- Pink eye
- Stomach flu
- Urinary tract infection
- Common colds
- Respiratory infection
- Bronchitis
- Headache
- Cold sores
- Insect bites
